

# NETWORK & SYSTEM ENGINEER

(FOR DEVOPS)

RIF.: IT-053

## DESCRIPTION

Our client is a technology company, part of a Multinational group, that designs and markets solutions and services to unlock the value of data for Telco, Industrial Automation and industrial IoT environment. We are looking for an experienced Network / System / DevOps engineer that will help our team to work closely with the technical lead to identify, develop and establish DevOps practices in the company. The candidate will define, implement, monitor and support the deployment and the maintenance of company's solutions both on customer's premises and on the company's private cloud. He/She will work in tight collaboration with the Software Development team, the Field Application Engineering team and the ICT team, so to ensure all relevant aspects of deliverability, maintainability and security at all levels, from system and product requirements, to deployment to maintenance

## QUALIFICATIONS – EXPERIENCE - SKILLS

- University degree or equivalent experience in Computer Science or Information Systems or equivalent discipline
- Proven experience in System Engineering and Network engineering
- Proven experience in configuration, maintenance and troubleshooting of server infrastructures, database systems, HA architectures
- Excellent competencies in Linux server administration and scripting languages
- Excellent competencies in IP internetworking (network design, router, firewall, switches configuration)
- Excellent problem-solving attitude and proven track record in solving network and system issues
- Flexibility, ability to prioritize activities and to efficiently manage time, meeting challenging deadlines
- Ability to work cross-functionally in dynamic and international environments and to work effectively and independently with all levels of the organization

## MAIN TASKS & RESPONSIBILITIES

- Manage code releases and deployments on cloud and on-premise infrastructures, crossing, smoothing and blending software development, testing, field operations and customer support
- Develop procedures to automate the deployment, testing, integration, of software releases and upgrades
- Identify necessary changes to maintain optimal system performances of solutions developed by the company both on customer's premise and on the company's private cloud service
- Perform security assessment on solutions and systems and liaise with software development team and with ICT team to implement and improve appropriate cyber security techniques, methods and policies
- Design server-based architecture to support customers' requirements of scalability and availability of deployable company solutions
- Generate and maintain appropriate documentation, change management and incident management policies
