

PROJECT – PRODUCT MANAGER

(IOT PROJECTS)

RIF.: IT-073

DESCRIPTION

Our client is a technology company, part of a Multinational group, that designs and markets solutions and services to unlock the value of data for Telco, Industrial Automation and industrial IoT environment. To support its growth path We are looking for an experienced and skilled professional to lead the responsibilities of Project and Product management by conducting market research generating product and solution requirements, determining specifications, development schedule, pricing and integrated schedule of time and resources for product and solution introduction to the market as well as to take full responsibility as project manager on company's developments.

QUALIFICATIONS – EXPERIENCE - SKILLS

- University degree in computer science, electronic engineering, telecommunications or equivalent discipline
- 5-8+ years relevant experience in Project and Product Management in IT organizations
- Proven work experience in product & project management on development of multi-disciplinary integrated solution of HW/SW & services
- Knowledge of the Agile product development methodology
- Knowledge of project management methodology and good understanding of project life-cycles and communication plans
- Ability to act as highly organised project team leader, able to work effectively and independently with all levels
- Proficient in English
- Ability to work cross-functionally in dynamic & international environments
- Professional experiences in software/hardware/system development or network/system engineering are a plus

MAIN TASKS & RESPONSIBILITIES

Act as connection between market and R&D: gathering and analyse data and business intelligence from sales, customers, prospects, competitors, industry analysts, etc and use this data to inform and steer the evolution of the product lifecycle. Advocate the company's choice as of product decisions with sales, customers, market as the best possible choice in terms of effective response to market requests and direction. Manage the whole project/product lifecycle:

- Personally own and manage the complete technical and organizational life cycle of new products/solutions/services development
- Work with Sales & Marketing and R&D Organizations to generate, refine and seal product and solution requirements/features/improvements, BOM and costs – with ongoing updates over the product lifecycle up to a smooth EOL phase
- Work with Sales & Marketing Organization to support bid response and provide technical references and information for regular sales activities
- Support regular availability and update of technical and business competitive analysis
- Provide input for product certification strategy and Interact and support QA for subsequent activities, assuring coherence of validation, certifications, documentation and transition
- Interact with engineers, IP team and patent attorneys to ensure product patenting and protection activities, manage and plan costs
- Support participation to grants and sponsored activities, managing related development projects
- Ensure an excellent communication flow with all the relevant internal and external stakeholders
- Follow up with the different parties involved in projects (such as internal teams and external suppliers) to secure on time and in scope deliverables
- Measure project performance using appropriate tools and techniques, including proper risk management, and escalate to upper management if required – ensuring achievement of the typical most relevant development targets (quality, cost, timing)
